

PRINCE KUMAR

Data Engineer

 princeanalyst04@gmail.com  +91-8237965795  Pune, India  LinkedIn  GitHub

PROFILE

Data Engineer with 4+ experience in building scalable ETL/ELT pipelines and cloud-based data solutions using Microsoft Azure, Apache Spark, PySpark, Snowflake, SQL, and Python. Skilled in Azure Databricks, Azure Data Factory, Delta Lake, and cloud migration projects involving large-scale enterprise workloads. Experienced in data transformation, incremental loading, workflow automation, and performance optimization. Strong understanding of data warehousing and distributed data processing in cloud environments.

TECHNICAL SKILLS

Programming Languages

Python, SQL(Advanced queries, CTEs, Window functions)

Cloud Computing

Databricks, Azure Data Factory, ADLS

Familiar

Jira, Confluence, Agile, Git, Datadog

Big Data Technologies

PySpark, Spark SQL, Delta Lake, Hadoop, Hive,DBT

Data Engineering Tools

Data Modelling, ETL/ELT data Pipeline,SnowFlake

EXPERIENCE

Data Engineer, <i>Inventus Info Consulting</i>	01/2024 – Present Bangalore
Big Data, <i>Winspire Solution pvt ltd</i>	2022 – 2024 Pune, India

PROJECTS

On-Prem ETL Migration To Cloud • Worked on cloud migration and modernization projects focused on automating complex enterprise workload migrations to cloud environments. • Designed and developed scalable ETL/ELT pipelines using Azure Databricks, PySpark, SQL, and Python for processing high-volume enterprise datasets. • Built automated data ingestion frameworks to migrate on-premise and legacy system data into cloud platforms including Azure Data Lake Storage (ADLS) and Snowflake. • Developed metadata-driven data pipelines and reusable Databricks notebooks to streamline cloud migration workflows and reduce manual effort. • Implemented incremental loading, CDC, and Delta Lake MERGE strategies for efficient synchronization of source and target systems. • Worked with Azure Data Factory (ADF) to orchestrate end-to-end data migration and transformation pipelines with monitoring and failure handling mechanisms. • Optimized Spark transformations, partitioning strategies, and SQL queries to improve large-scale data processing performance.	02/2024 – Present
--	-------------------

RTS KYC, Domain - Banking and Financial12/03/2022 –
15/01/2024

- Developed an ETL pipeline utilizing an in-house cloud-based framework to meet regulatory and business requirements.
- Collaborated with business analysts to gather requirements and tailored code to meet project specifications.
- Conducted end-to-end testing, addressed defects identified by the Quality Engineering (QE) team, and deployed code across various environments (SIT, PAT, PROD).
- Processed data from over 30 sources, using JSON for file parsing and validation, and stored it in Delta Lake for further use.
- Developed PySpark scripts to ensure data integrity through validation before delivery to downstream systems, facilitating data transfer to users such as Patriot Officer and Pega Systems via TIBCO mailbox.
- Loaded raw data into Azure Data Lake and transformed curated data into Snowflake.
- Implemented incremental data loading using Snowflake Streams and Tasks.
